

J. Jonah Jameson is a harsh editor-in-chief who works at the Daily Bugle, and he only cares about a couple things: Money, Spider-Man, and the best of the best stories. Not many people like him due to his aggressive attitude, his obsession with Spider-Man, and want for money.

J. Jonah Jameson found his stride in profit by exploiting Spider-Man. He made sure that his papers were filled with nothing but showing Spider-Man as a villain instead of as a hero. Many people didn't believe this but it didn't matter to him since he was making massive profit.

His newspapers gained massive popularity over the people which inspires Jameson to continue posting newspapers where Spider-Man is a villain.

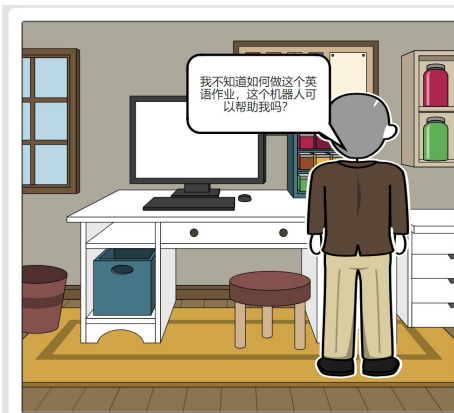

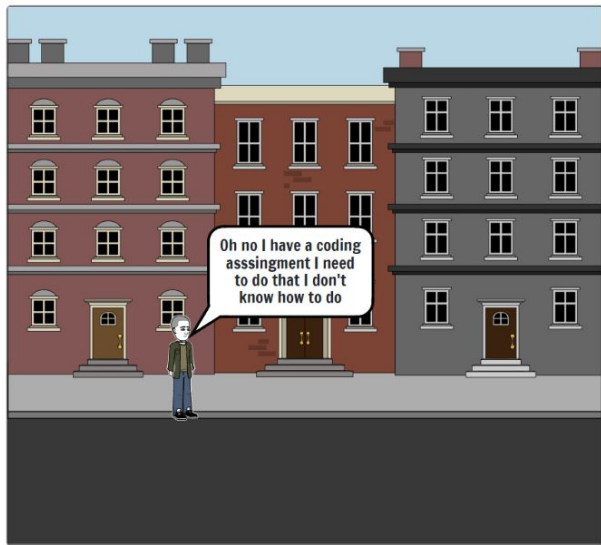

Many of his co-workers thought that Jameson was insane to think Spider-Man is a hero, since he saved many lives, but Jameson didn't care. He was making money, gaining popularity, and seemed like he's becoming obsessed with Spider-Man

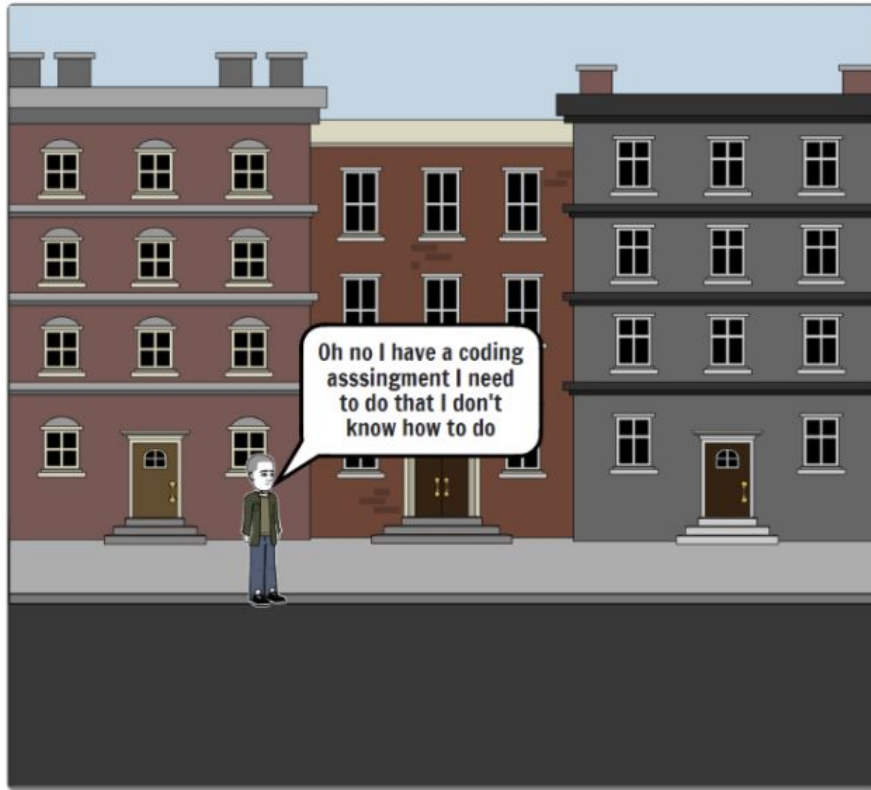

Jameson became so obsessed that Spider-Man is a villain, to the point he sees the hero's action that is for the good as a negative by all means.

When other newspapers wrote about Spider-Man's heroic actions, Jameson's papers were gaining lots of backlash and thought that Spider-Man ruined his career and life. (In reality nothing major happened but Jameson was losing his mind over Spider-Man)

He didn't know how to do his assignment so he started to panic

Because he didn't know how to do his assignment he knew that he could use his AI to help him write code

The AI is willing to help but it will not give him the exact answer

His father is trying to learn english and doesn't understand english and needs help so he asks the AI

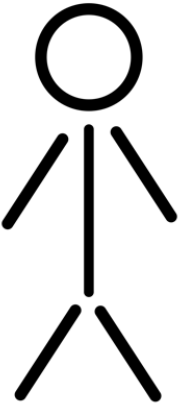

The AI points him to what he is doing wrong in his language and the AI is fluent in almost every current language.

I'm going to end up working on this all night again. It's easy to do but it takes up way too much time to do...
I guess I can try that AI app my friend told me about.

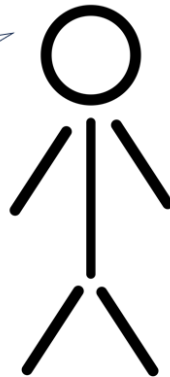

I can't believe I'm already done with all my work.
I usually never finish this early.
I'm definitely using this app from now on.

- Nia wants to go out with her friends tonight but has a ton of math homework to do
- Even though she's great at math it's going to take her all night to finish

- Using the app Nia finished her work in record time and can now spend her time doing things she actually wants to do.

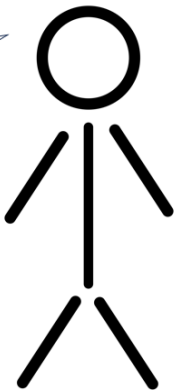

This app is amazing. Not only can I use it speed up the process of doing my homework I can use it to double check that I'm doing it right and because it's a computer doing the work instead of another human, I know I can trust the results I get back

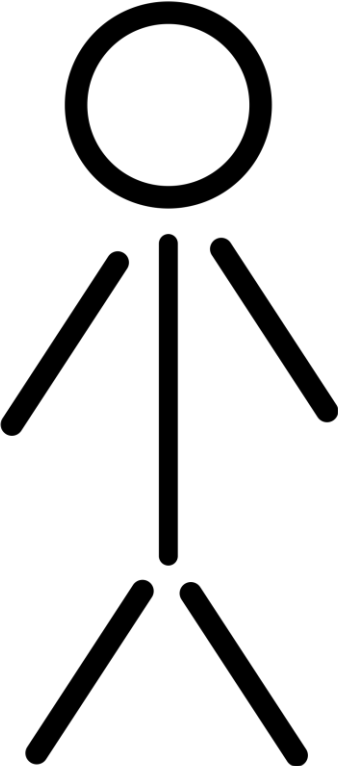

- Nia finds the app amazing and knows that she can use it for multiple purposes.
- She also finds relief in knowing that she can trust the results she gets back.

This app seems nice.
It looks like I can take a picture of my problem and the AI that integrated into the app solves it in every possible way. Wow... It also shows me how it got to its answer.
This will definitely help speed me up

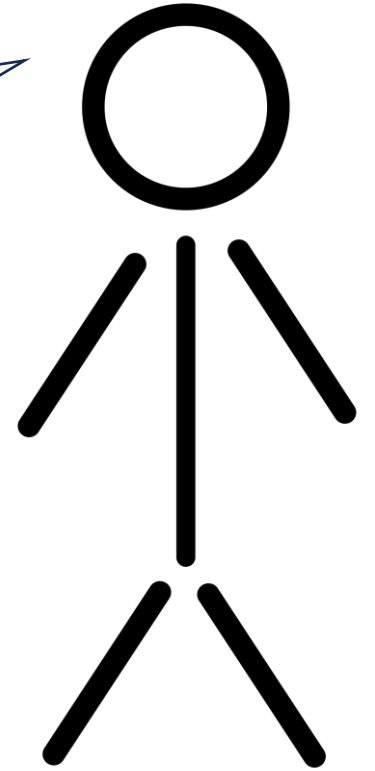

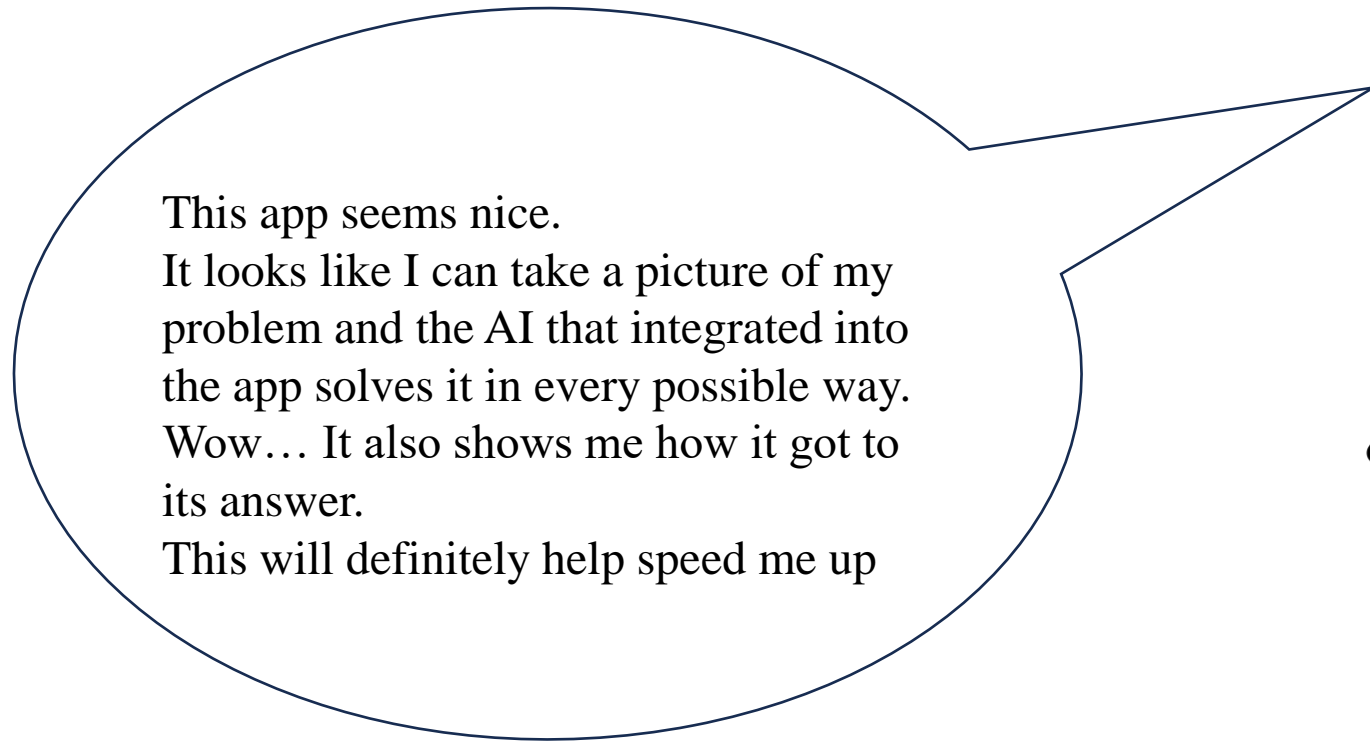

- Nia decides to use the AI application her friend told her about and finds it extremely useful.

The students are going home to take their tests and find themselves using AI to get answers.

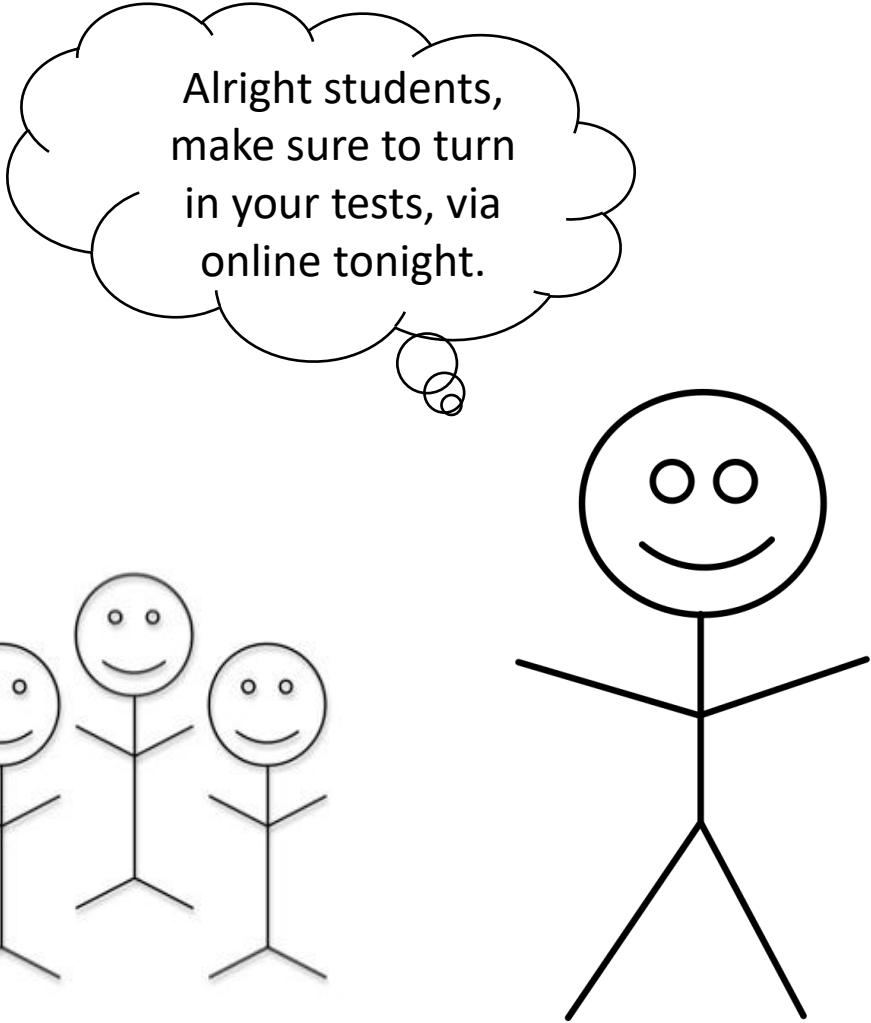

Jayne ran across an app where an individual can take a photo or upload any document, no matter the size, to see if they have been created by AI.

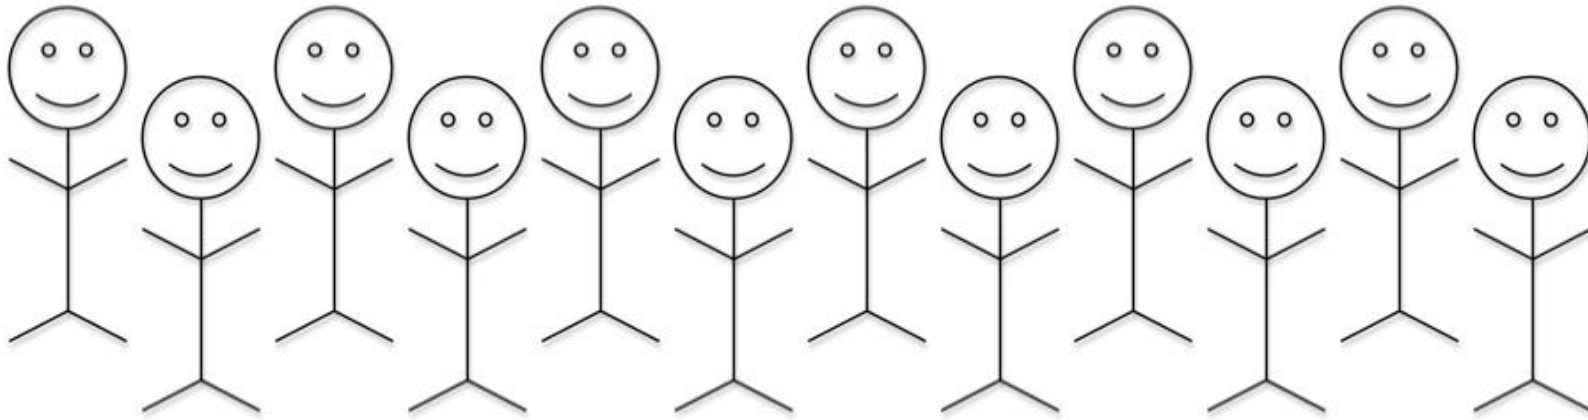

The test scores come in, and Jayne Greek clearly realizes that the students must have cheated. After googling and noticing how popular AI is getting, she began to look for a solution to find out the truth.

The app will also give a percentage of AI detection in the assignments that were uploaded. This makes it where Jayne can change her curriculum to fix this error. She can make all the tests in person now to ensure that there is no cheating.

A stick figure representing a teacher stands on the right side of the image. Above its head is a thought bubble containing text. The teacher has a large circular head with two small circles for eyes and a curved line for a smile. Its body is a single vertical line with two diagonal lines for arms and two diagonal lines for legs.

Alright students,
make sure to turn
in your tests, via
online tonight.

The students are going home to take their tests and find themselves using AI to get answers.

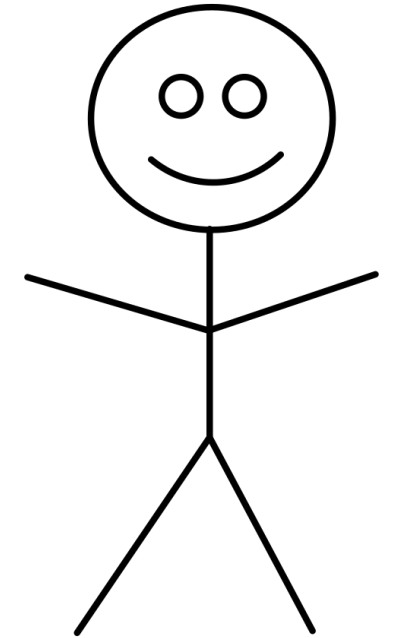

Class Average on Last Test

84.39

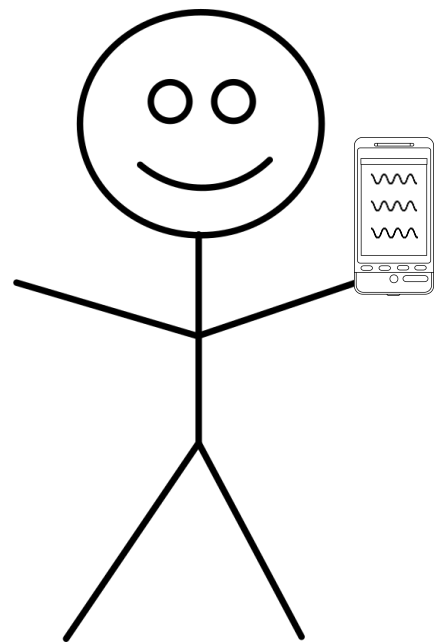

Class Average on New Test

99.62

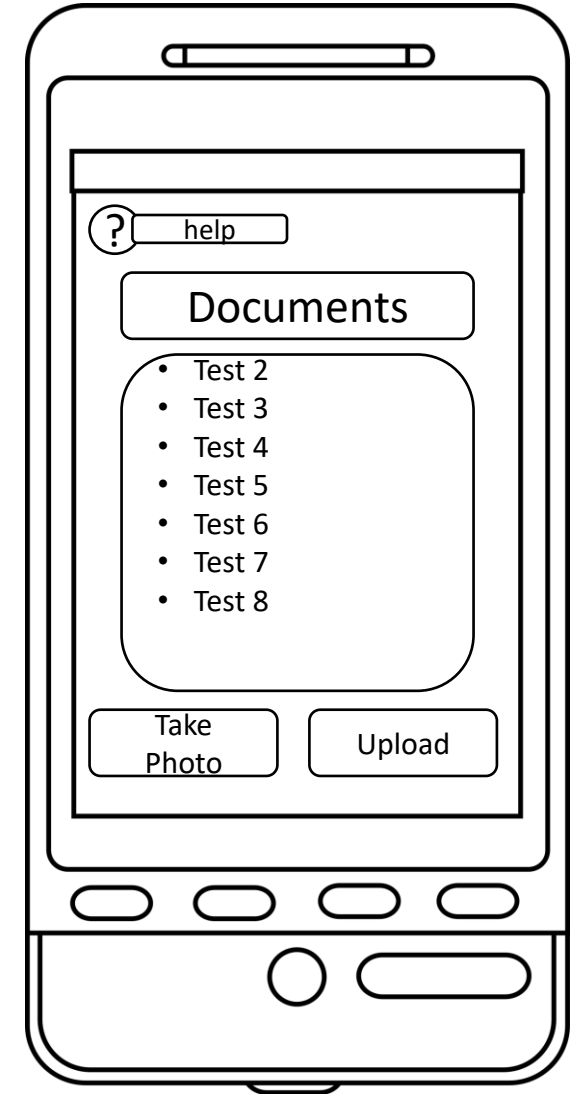

Mhmm...something
here isn't right! I wish I
could check to see if
my students used AI!

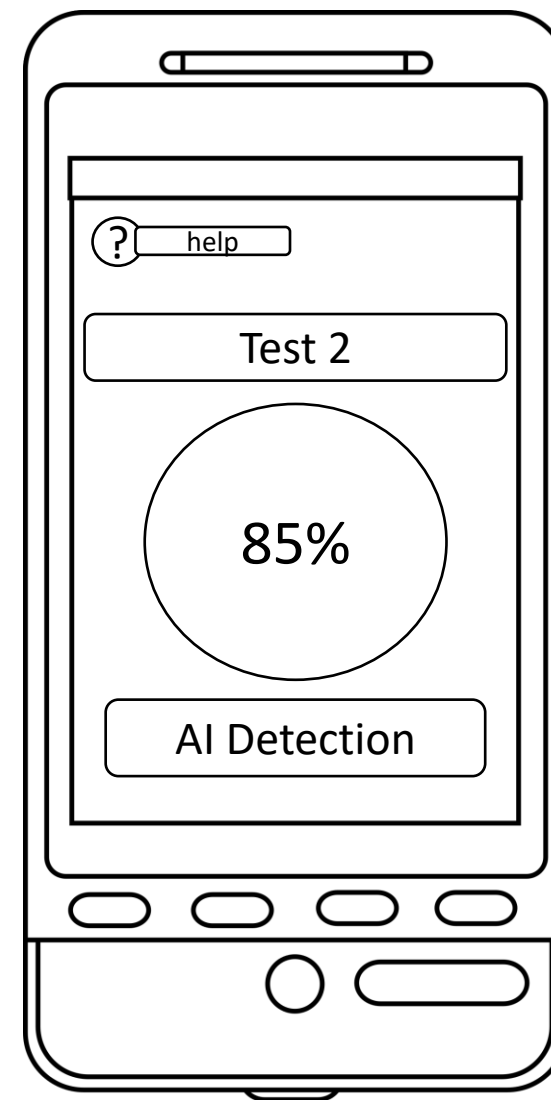

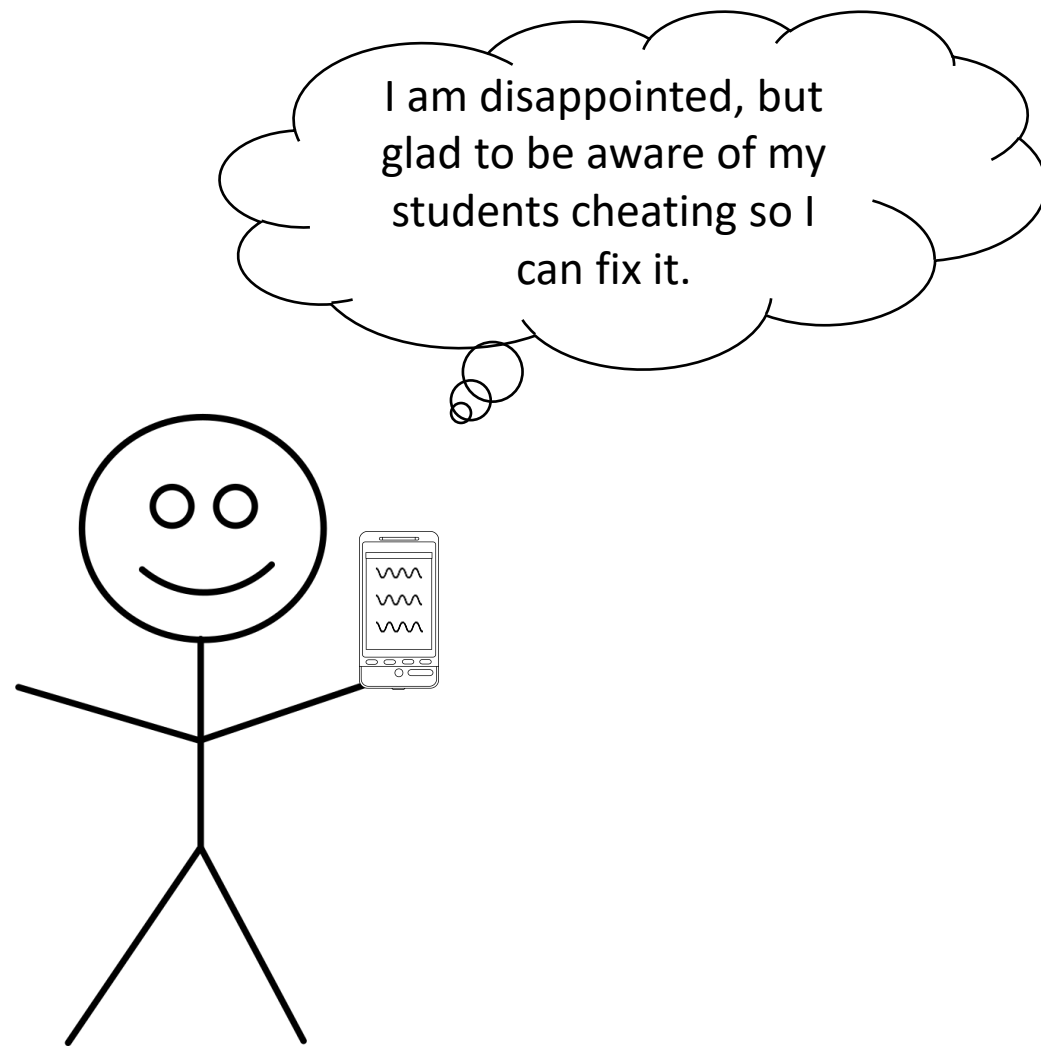

The test scores come in, and Jayne Greek clearly realizes that the students must have cheated. After googling and noticing how popular AI is getting, she began to look for a solution to find out the truth.

Finally, an app where I
can upload my students'
tests to check them!

Jayne ran across an app where an individual can take a photo or upload any document, no matter the size, to see if they have been created by AI.

The app will also give a percentage of AI detection in the assignments that were uploaded. This makes it where Jayne can change her curriculum to fix this error. She can make all the tests in person now to ensure that there is no cheating.
